

Model QDS 124

Inside of Hardening Furnace

Inside of Tempering Oven

Optional QTS 124 Agitated Quench Tank

High Uniformity in a Space Saving Tool Room Furnace

The QDS124 and QDS126 are our "Top-of-the-Line" smaller dual chamber tool room heat treating furnaces. They feature a highly uniform hardening furnace that reaches 2350°F (hot enough for high speed tool steels) and a tempering oven with recirculating fan that reaches 1250°F. Elements on the sides, top and bottom uniformly heat the load in the hardening chamber maximizing the uniform effects of the radiant heat. The fan and stainless baffle maximize the effects of convection heat in the lower temperature tempering oven.

Your Thermal Investment Deserves Special Treatment
